Design Computing Studio 2

Interaction Design

Assessment 1: Project Proposal

Due Date: 7th Sept 2026, 15:00 via the Blackboard site
Weighting: 20% [UG] / 10% [PG]
Individual Work

Description:

Students will develop their project proposal, describing 1) main idea of their project, 2) desired interactions supported by their interactive application, and 3) potential ethical issues. Students will write a proposal of ~1500 words, following a structure provided below. While students will work on a six-members team for their projects, this assessment is their individual work representing their own vision and outcomes for their projects.

Learning Objectives:

1. Apply understandings of interaction analysis, ethical conduct and critical thinking in design projects.
2. Learn conventions on searching, reviewing and referring peer-reviewed work on ethics

Deliverable:

A proposal focused on describing your project, proposed interaction design of a potential interactive application and a set of ethical issues that may be relevant to the project. It is expected that the report will be around 1500 words. You should use APA referencing format. You must acknowledge if you used any use generative AI tools (e.g. ChatGPT). In this case, a sharable public link of your chat should be added to an "AI Acknowledgement" section (in English).

Report Contents:

Your report should contain the following

- **Project Definition (30%):** A description of the design project, clearly indicating the problem space, overall settings and information about the users involved in the space and the proposed design solution/application.
- **Significance of Proposed Interaction (30%):** A clear description of how potential users will interact with your application, describing: the core interaction, interaction qualities, modalities and the overall context within which the interaction takes place.
- **Ethical Issues (30%):** Identify and prepare a list of potential and imminent ethical issues in your project. Describe your action plan to deal with these issues. A table should be prepared for this section.
- **Language & Presentation (10%):** Clear and concise writing with minimal grammar issues.

Detailed Assessment Criteria

Criteria Points	7 – High Distinction	6 – Distinction	5 – Credit	4 – Borderline Pass	3 or Less – Fail
Project Definition **30%**	Report defines the project in an excellent manner Clearly identifies and describes the main phases of the project	Report defines the project well but lacks depth in describing the problem space, overall settings and users Clearly identifies and describes the main phases of the project	Report summarises the project well but lacks depth in describing the problem space, overall settings and users Main phases of the project are not described sufficiently	The project is not adequately described and needs more clarity A clear lack in describing the main phases of the project	No or minimal effort in summarising the project A haphazard attempt
Significance of Proposed Interaction **30%**	Describes core interactions with exceptional clarity and precision. Provides insightful, well-supported justification for interaction qualities and modalities. Shows nuanced understanding of user needs and real-world contexts.	Core interactions are clear and well-explained, with minor gaps. Justifications are strong but not deeply explored in all areas Demonstrates good understanding of users and scenarios, with minor gaps	Core interactions are described but lack some detail or focus Some reasoning is provided, though partially generic or shallow Identifies users and contexts but lacks depth or nuance	Core interactions are vague or partially unclear to the reader Minimal justification with weak links to design choices Mentions users/contexts superficially, with little connection to design	Fails to describe the core interactions of the application No meaningful justification for interaction qualities or modalities No understanding of users or usage contexts demonstrated
Ethical Issues **30%**	Outstanding evidence of identifying potential ethical issues; at least 5-8 ethical issues are identified Excellent action plan to deal with the identified ethical issues Overall, a great demonstration of understanding and handling	Good evidence of identifying potential ethical issues; at least 5 ethical issues are identified A few points in the action plan needed clarification and justification Overall, the report demonstrates a good understanding and handling	Not all the potential ethical issues are identified; less than 5 ethical issues are identified A several points in the action plan needed clarification and justification Overall, the report demonstrates a satisfactory-level of understanding	Several misses in identifying ethical issues; only a few ethical issues are identified Action plan lacks important details Overall, the report demonstrates a very superficial level of understanding ethical issues in design projects	No or minimal effort in identifying and handling ethical issues in the design project A haphazard attempt

	ethical issues in design projects	ethical issues in design projects	ethical issues in design projects		
Language & Presentation **10%**	Writing is concise and points are well articulated Excellent, few or no grammatical or spelling mistakes	The paper is well organised, developing an argument and rooting this in evidence. Clear, some grammatical or spelling errors	There is a clear organisation to the paper, but may not always be logical or flowing Generally good, a few errors, inconsistent spellings	Evidence of organisation of the argument, but only adequately structured Poor, grammar sometimes makes meaning difficult to interpret, Inconsistent spelling or grammar	Little or no evidence of organisation, no logical development Falls far below the standard for submission and is frequently difficult to follow.
